Comments

F-104G and TF-104G were delivered as MAP aircraft from the USAF, were they had the registration FG-XXX (XXX being the last three numbers in serial). The F-104G was built by Canadair and TF-104G by Lockheed.

A further 10 were offered as MAP aircraft, but this was not taken up. All the remaining MAP aircraft (except R-756) were packed in containers and returned to the USAF, who sent them on to the TwAF. Here they were officially Soc 22/5-1998. The Soc date for the individual aircraft is not known.

Comments

The CF-104 was built by Canadair and CF-104D by Lockheed. They were both bought used from the RCAF , on the 24/9-71. They were modified to F-104G standard at the main workshop at Aalborg AB.

Due to a crack in the tail on R-707, it was swapped over with the tail off R-825. As R-825 was to be used as Gateguard for 726 squadron, it's tail was swapped again for that off R-896.
